#### **TEXAS, South Panhandle**

(TX-Z021) PARMER, (TX-Z022) CASTRO, (TX-Z023) SWISHER, (TX-Z024) BRISCOE, (TX-Z025) HALL, (TX-Z026) CHILDRESS, (TX-Z027) BAILEY, (TX-Z028) LAMB, (TX-Z029) HALE, (TX-Z030) FLOYD, (TX-Z031) MOTLEY, (TX-Z032) COTTLE, (TX-Z033) COCHRAN, (TX-Z034) HOCKLEY, (TX-Z035) LUBBOCK, (TX-Z036) CROSBY, (TX-Z037) DICKENS, (TX-Z038) KING, (TX-Z039) YOAKUM, (TX-Z040) TERRY, (TX-Z041) LYNN, (TX-Z042) GARZA, (TX-Z043) KENT, (TX-Z044) STONEWALL

05/01/18 00:00 CST 0 Drought

05/31/18 23:59 CST

Abundant rainfall benefited some areas in May, particularly for the Rolling Plains and extreme southeastern Texas Panhandle. However, little rainfall in the western South Plains allowed drought conditions to worsen. Somewhat regular rain fell from the central South Plains into the Rolling Plains and extreme southeastern Texas Panhandle during the middle of May. Drought conditions improved to as low as D1 (Moderate Drought) in some spots but remained as high as D3 (Extreme Drought) in others. The western South Plains generally worsened from D2 (Severe Drought) to D3 drought conditions. May also brought very hot weather and was by far the hottest May on record. Much of this heat was caused by an abnormally strong upper level high pressure system from northern Mexico into West Texas. La Niña, which was a significant driver of this long term drought, officially ended in May. Grasses were starting to green up but rain was desperately needed for all aspects of agriculture. Crops under irrigation were performing well so far, especially under the hot temperatures experienced in May. Lingering hot, dry, and breezy conditions have prolonged fire weather concerns, especially from the western South Plains into the extreme southwestern Texas Panhandle.

#### STONEWALL COUNTY --- 3.0 NE ASPERMONT [33.18, -100.19]

05/02/18 16:05 CST 0 Thunderstorm Wind (MG 52 kt)

0

05/02/18 16:05 CST 0 Source: Mesonet

A Texas Tech University West Texas mesonet site near Aspermont measured a wind gust to 60 mph.

LUBBOCK COUNTY --- 2.0 NE SLATON [33.45, -101.63]

05/03/18 00:50 CST 0 Thunderstorm Wind (MG 52 kt)

05/03/18 00:50 CST 0 Source: Mesonet

A Texas Tech University West Texas mesonet site near Slaton measured a wind gust to 60 mph.

A large upper level storm system over the desert southwest of the United States fostered the development of dryline convection over the far eastern Rolling Plains on the afternoon of the second. One of these storms became severe in Stonewall County before exiting into northwest Texas. Late on the second into the early morning hours of the third, a strong low level jet developed allowing thunderstorms to expand into the eastern South Plains. One of these storms produced a severe wind gust at Slaton (Lubbock County).

#### HALL COUNTY --- 0.6 WSW MEMPHIS [34.72, -100.54], 0.6 W MEMPHIS MUNI ARPT [34.73, -100.53]

05/08/18 19:50 CST 0.10M Thunderstorm Wind (EG 65 kt)

05/08/18 20:05 CST 0 Source: Public

A swath of destructive winds lasting for up to 15 minutes moved north across the city of Memphis this evening. These winds resulted in scattered minor to moderate damage in the town of Memphis. Most damage was comprised of broken tree limbs, a few downed trees, damaged shingles and siding, collapsed car ports, some broken windows, and a few downed power lines.

#### HALL COUNTY --- 0.9 NW MEMPHIS [34.73, -100.54]

05/08/18 19:55 CST 0 Thunderstorm Wind (MG 65 kt)

05/08/18 20:05 CST 0 Source: Mesonet

Measured by a Texas Tech University West Texas mesonet. Severe wind gusts of 60 mph, 66 mph and 75 mph were measured at 1955 CST, 2000 CST, and 2005 CST, respectively.

A line of high based thunderstorms moved east across the far south-central Texas Panhandle this evening. As these storms decayed in the far southeast Panhandle, a core of destructive winds (measured from 60 to 75 mph) developed on the backside of the precipitation and persisted for 10 to 15 minutes. These winds inflicted scattered minor to moderate damage in the city of Memphis (Hall County).

05/15/18 20:45 CST 0 Thunderstorm Wind (MG 57 kt)

05/15/18 20:45 CST 0 Source: Mesonet

A Texas Tech University West Texas mesonet near Turkey measured a wind gust to 66 mph.

On the afternoon of the 15th, a cold front pushed into the southern South Plains initially developing thunderstorms in the Permian Basin. However, strong instability north of the frontal boundary combined with an advancing short wave in New Mexico brought significant severe convection to the South Plains and extreme southern Texas Panhandle. Initially, thunderstorms brought severe hail to the area. Crosbyton (Crosby County) took the brunt of the damage with widespread damage reports in the town due to wind-driven baseball size hail. An NWS storm survey the next day revealed numerous south facing windows on buildings destroyed along with many totaled vehicles. In Abernathy (Hale County), penny to quarter size hail completely covered Interstate-27. As the evening progressed, storms moving into the area from New Mexico primarily created severe wind gusts. A large swath of wind gusts spanned from western Hale County into central Floyd County. These strong wind gusts blew over a tractor trailer on Interstate-27 just north of Plainview (Hale County).

Photograph taken in Crosbyton of the southward facing portion of a building showing many broken windows. Photograph is from the NWS Storm Survey.

LUBBOCK COUNTY --- 0.9 NE WOLFFORTH [33.51, -102.01], 1.7 W LUBBOCK [33.58, -101.88]

05/17/18 15:18 CST 0 Hail (1.00 in)

05/17/18 15:39 CST 0 Source: NWS Employee

A swath of hail up to quarter size moved northeast from Wolfforth into west Lubbock. The hail was described as soft which may have contributed to the lack of damage reports.

Scattered thunderstorms developed late this afternoon ahead of a dryline, initially in the Rolling Plains and then farther west and in greater number across the southern South Plains through late evening. Strong instability and moderate wind shear resulted in many of these storms becoming supercells, some with destructive hail to 3 inches in diameter, but very few severe wind gusts were reported. The south side of Lubbock was especially hard hit by very large hail that fell for up to 15 minutes in some locales. Total losses to

homes and vehicles in Lubbock alone could exceed \$30 million. Some of these supercell storms were stationary at times which led to torrential rain, flash flooding and at least two road closures.
